Description

Description:	<p>On the edge of the town, the villa is located in a peaceful environment, surrounded by greenery, vineyards and olive groves, and offers a beautiful panoramic view of nature, the town and the mountain Učka. It consists of a ground floor and a first floor. On the ground floor there is a spacious kitchen with a dining room, a living room, an entrance hall and a staircase, two "en suite" bedrooms, a storage room, a separate bathroom and a covered "L" terrace and a pool of 55 m². On the first floor there are two more "en suite" bedrooms, a gym, anteroom, sauna, hallway with a staircase, a separate bathroom and a covered terrace with a wonderful view. All rooms in the villa have above-average dimensions and heights. Further on in the text, we will introduce you to the concept of passive house through the description</p>
--------------	---

of its main characteristics. For more detailed information or additional clarifications, feel free to contact us, and we can also send you a brochure in electronic form. What is a passive house? A passive house is a building built according to the strictest energy standards in the world, designed by the Passive House Institute from Darmstadt. These standards not only reduce energy consumption but also ensure a high level of thermal comfort. Whether it's family homes, office buildings, schools or hospitals, all buildings that meet the Passive House standard offer exceptional comfort with minimal energy requirements. There are no cold surfaces, moisture or stagnant air in passive houses. Fresh air circulates constantly, while energy is saved at the same time. They are also extremely quiet, thanks to advanced heating, cooling and ventilation systems. The key characteristics of a passive house include: Fresh and filtered air in all rooms, always. A constant feeling of comfort thanks to maintaining a stable temperature of all surfaces. Complete insulation without thermal bridges. Air tightness, preventing unwanted air infiltration. Silence and peace, achieved by the insulation and ventilation system. Heating via Samsung multisplit system with cassette air conditioning units. Cooling without blowing thanks to Samsung WindFree technology. Always hot water, thanks to the heat pump of the renowned manufacturer Stiebel Eltron. Swimming pool management from the comfort of your home, with minimal energy requirements. Energy needs in Passive House Barban are minimal, with estimated annual costs of only 1,500 euros. Passive house certification includes a thorough check of all budgets, models and performance by authorized experts, ensuring that your building meets all the stipulated standards. Upon completion of construction, your building will receive a certificate and be entered into the world database of passive houses. ID CODE: IS1513692
